

Drowning In Litter

Topic - There is too much rubbish in the school grounds. By Devanshi

Litter is a big problem these days, especially in schools. Litter is really harmful to the environment, especially to our little marine friends. So what can we do to help? Let us find out...

Firstly, one of the main problems is the rapid increase of junk food devoured by children each day. As soon as children have some junk food they start getting lazy, and too lazy to put their litter away. This makes people leave litter on the ground, and as soon as they get away with it, they do it twice, thrice, five times and then they just get used to it.

So how does this affect us? The rubbish affects us and also some animals. When it rains, the rubbish gets washed away and away. And eventually, it ends up in the ocean. The sea creatures, such as ; fish, sea turtles, dolphins, etc, think of it as food and eat it. This makes them sick, very sick, infact, they could possibly die. This could also affect us as the litter could create a foul odor, and spread sickness everywhere.

So how can we prevent ourselves from drowning in litter?

Firstly, we could stop eating too much junk food, or foods that would make us lazy. This will help us not stop putting the litter away. Secondly, we should start leaving the wrappers at home and keeping our food free in our lunch boxes. Lastly, we should start picking up rubbish from the school grounds and putting it in the right place.

In conclusion, we should not litter and start picking up litter to keep our school clean. What are you waiting for? Let's make this school litter-free!!

There is too much rubbish in the school playground

Firstly

I agree that there is a lot of rubbish in the school playground because I see people littering everywhere in school and outside school as well. People litter because they eat too much junk food and they get too lazy to lazy to throw rubbish in the bin. Also litter can pollute the air, it can also cause health problems and can even cause acid rain.

Secondly

Marine animals will think rubbish is food and will swallow small plastic parts and choke and starve. Litter can endanger wildlife, poison our food and even affect climate change.

Lastly

You can stop pollution by reducing the number of trips you take in your car. You can also pack litter free lunch boxes and always throw your rubbish in the bin. That are my reasons that there is too much rubbish in the school playgrounds.

By Oscar

There is too much litter on the playground by Jacqueline

- There is too much litter in the playground because people are getting lazy to go to the bin and they just want to litter. Little kids don't know what littering is so we older kids have to show the little kids why littering is bad.
- Litter is bad for us and the environment. It's bad for the environment because it will sink into the earth and it will go yuck and the water will become unhealthy we don't want to ruin the beautiful island we have
- Our school has TOO MUCH litter. Some other kids from Rm 26 & Rm 16 pick up the rubbish just to keep our school clean. After lunch and morning tea sometimes they miss out on class time just to pick up some rubbish. All learning is important to class. It will help you learn in life. Stop littering and throw it in the bin.

Should children throw rubbish on the ground by Emily

- *My opinion*

I strongly believe that throwing rubbish on the ground is not right. The children should not let Troy do the job of picking up all the rubbish. Do not throw rubbish on the ground again.

- *why*

Because if there is too much rubbish on the ground, our planet Earth will be affected so tremendously that you won't be able to live a healthy life. The water will be contaminated and the air will be polluted. It will be difficult for us to breathe or drink the polluted water.

So do not throw rubbish on the ground again.

There is Too Much Litter at school

I personally think there is way too much litter on the playground and turf and kids are not being responsible for their own rubbish. I think we should punish the kids that don't put their rubbish in the bins like if they don't put their rubbish in the bin they should have to pick up 10 pieces of rubbish or just get reminded to put it back in the bin.

Secondly

If you don't put your rubbish in the bins it would be really harmful to the environment, animals and themselves. Throwing rubbish on the ground would harm the environment because it takes around 10 years to 500 years to decompose the rubbish into the ground. When it takes that long to decompose animals would already have tried to eat the plastic and litter people threw on the ground and when the animals tried to eat the rubbish they would choke on it and sadly die.

Lastly, the rubbish is really harmful to the environment. It causes diseases and many health problems which not only affects you but also your family and you may not even live a good healthy life.

In conclusion I believe that Litter is a major problem around the world and it needs people to take responsibility for the next generation.

THERE IS TOO MUCH LITTER ON

THE PLAYGROUND

by Christabelle

INTRODUCTION Hi my name is Christabelle and I want to tell you three different reasons why there is too much litter on the playgrounds or on the ground by playgrounds so let me tell you the three reasons why not to litter.

FIRSTLY I want to give some reasons on how to stop littering. There is something called a rubbish bin and it's really simple to walk up to a bin and put rubbish in. It's not that hard. There are inside and outside bins and in front of every classroom.

SECONDLY We should not be having litter in our lunch boxes because of what happened to litter free lunch boxes. We should be reusing our plastic and cloth, especially metal. We do not want rubbish to take over our school. Well not just our schools also outside on the roads and parks. It's everywhere we need to stop.

LAST BUT NOT LEAST Do you know where rubbish goes?

Well let me tell you where it goes, it goes into the ocean and still kills sea creatures. Try having all litter free lunch boxes and please use rubbish bins.

CONCLUSION- Hopefully you guys will stop littering, remember to use the bins and put rubbish where it should go.

There is too much rubbish on the playground

In my opinion people should pick up their rubbish not leave it on the school grounds.

Firstly

It is really bad for the environment if we leave rubbish on the ground and the place will stink a lot and if we trash the playground there won't be anywhere to play in the playground and little birds might get trapped inside some bottles or cans and it will really injure the animals around us and if we leave the rubbish and continue this habit then we might turn the school playground into a waste landfill.

Secondly

there is so much trash on the playground normally i don't go near there but when i step out my class room and look to my left i see all the trash people have left there and when i play in the playground i see even more trash at the playground the people who leave it i think they should pick it up instead of throwing it on the floor left alone for others to pick up there should be punishments for people who throw rubbish. Don't we want a clean world?.

Lastly

When there is too much trash at the playground we will have no were to play and we have to stay inside do boring stuff it might be contagious with covid and make all the students sick and it will be bad for the school and the school will be closed down i think we should do something about it before it actually happens.

Conclusion i think we should stop throwing rubbish on the floor and start picking it up!

There is too much Litter on the playground

by Kingston

I think it is a big problem these days. Many people litter because after they finish eating their junk food, then kids and older people just throw their rubbish on the ground.

Here are three reasons why litter is a big problem.

Firstly, Litter can harm nature, wildlife and animals like

Sea turtles, tropical fish and many more species. Litter can harm the ecosystem { Did you know that over one million animals die each year} and plastic litter is the most common Killer?

Secondly, Litter can harm humans. Litter

contains toxic chemicals and disease causing microorganisms in the trash. And litter causes a lot

of health problems.

Lastly, litter is dangerous to our environment and 40% around the world is burnt litter which then gets released into the open air and releases toxic emissions.

So agree with me, we need to stop littering. And also In conclusion I believe littering is a major problem. It is messy to the eyes, causes diseases and kills animals and sea creatures.

1 Hi my name is Delta and I am going to give three different reasons why and how we can stop litter.

There is too much litter on the school playground. I think there is too much litter because at my school there is a class that picks up rubbish at lunchtime and at morning tea.

If you go to the beach and look you can see rubbish. It is not good. It can go to the sea and if you don't know what happens to the fish they die .

We should not have packaged food and wrappers in our lunch boxes because sometimes wrappers can fly out and into the sea. It is bad and when we put rubbish in the bin it all goes in the ocean.

A conclusion- Hopefully you guys remember the steps that I told you we need to be more serious about rubbish

By Delta

There is too much litter on school playgrounds?

There is too much litter on school playgrounds.

Firstly, I think that there is too much rubbish. For example chip packets, chocolate wrappers, muesli wrappers but there are millions more. But listen, even though there are so many coke cans and wrappers and packets of trash that does not mean that you can also start littering as well.

Secondly, I will be telling you how it affects humans, animals, plants and other living things. Litter can not only affect us but animals and plants as well. Trash can first of all affect animals. People get really lazy and litter.

Then the trash goes to the sea and the sea creatures think that it's food so they eat it and well pass out. Litter can affect plants with pollutions. Pollution is very bad.

Thirdly, I would like to tell you how you can stop it. One way that you could stop litter is by picking up thrash and putting it in the bin. One more way you could help our environment with is by educating other people and telling them not to litter. So in my opinion I think that you should agree with me and help the earth become a better place for everyone to live on.

By Maimuna

There should not Be Junk Food in School Lunch Boxes

JUNK FOOD is not good for your teeth because it will make your teeth dirty and rotten. It will give you cavities and that's why you should never bring Junk Food to school

Secondly, kids might see it and then they will ask for some treats and then they will all get cavities and then they will not brush their teeth so that's why you should never bring Junk Food to school.

Thirdly, some kids just throw their Junk food trash on the ground and the kids have to pick their trash up and put it in the trash can.

By Matthias

THERE IS TOO MUCH RUBBISH ON THE SCHOOL GROUNDS

Aksshat

These days there is much rubbish on the school grounds. Kids are being lazy and are throwing rubbish at a random place instead of the rubbish bin. We actually should be putting rubbish in the bin. Here are my reasons why.

Firstly, this is bad for mother earth. This rubbish flies to the seas, damaging the coastal environment, harms the physical environment and spreads very bad chemicals. Fishes such as whales end eating rubbish with a high chance of dying. One whale ends up eating 3.2 Kg of rubbish. This is bad. If we put rubbish in the bin, we save the ocean creatures' lives as well as other creatures. The environment is not impenetrable from rubbish so we have to save it.

Secondly, rubbish makes our school look like a waste dump. We must really start to actually put rubbish in the bin. When kids eat packaged foods, they get very lazy. Since NZ is a windy country, the wind blows the packet away and the child is too lazy to get it.

Thirdly and lastly, if we get too lazy, the trash will start to pile up, inviting creatures such as rats. This will invite diseases because of dirtiness.

These are my reasons.

There's too much litter in the school playground. By James

There is way too much litter in the school playground and it seems everywhere you look there is rubbish. But there are ways we can stop this from happening and us being surrounded by litter.

Firstly, you can aim for a litter free lunch box. Also you can take wrappers of things and put them in reusable containers. Always make sure that you put your rubbish in the bin because otherwise it will hurt animals and the environment. I will elaborate in the next paragraph.

Secondly, if litter is left on the ground then it will flow into the rivers and oceans. Marine life will then mistake it for food and eat it. If we eat fish with plastic in their stomach then we will get sick because we'll eat the plastic in their stomach.

It will also affect the environment because if it ends up in rivers and oceans then the species that live will have to leave their homes.

In conclusion there is too much litter and litter is bad but there are ways we can help stop it. I hope I have informed you and persuaded you to not litter.

There is too much litter on the school playground

By: Shalom

There are too many kids in school walking around with their food, and going to the playground and just leaving the rubbish on the school playground? Well, I think we should not do that to our school playgrounds.

Firstly, it will make the school playground so dirty and stinky that it will cause diseases. Just because of so many bugs and bacteria that will make you not go to school.

Secondly, the litter makes you really sick because it causes you salmonella (means typhoid fever) Food poisoning, enteric fever, stomach flu, and other major illnesses.

Lastly, if you throw rubbish on the school playground. Then the wind will blow the rubbish and go to different places. For example, the rubbish will go to the city, lakes, rivers and beaches.

In conclusion, I believe we should not litter at the school playground, to keep the school playground much cleaner. And Keep the earth healthy.

There is too much rubbish on the school grounds.

In my opinion, I t think that people don't care about littering.

firstly, did you know that every year 8 million tonnes of plastic end up in

our planet's beautiful blue oceans And that's seriously bad news for

our friends. Over 700 species of marine animals have been reported to

have eaten or been entangled in plastic and scientists think that the

amount of plastic in the ocean may triple by 2050! But here's the good

news by understanding the issue and taking action, you can help change

the future and make our oceans a clean, safe place for our wonderful

wildlife

In conclusion I believe this is a virus and it spreads just like if you don't

There's too much litter in the school playground. By Sahar

Imagine it is the year 1998, and you're standing on a beautiful beach... fast forward to 2050, the beach is filthy, rubbish and dead fish litter the sand while you watch big beefy people sunbathing and throwing coke cans into the water which is a horrible dark brown colour.

This is what I imagine the world to be like if we don't start taking action soon.

Go look outside, there are monstrosities of rubbish. This is NOT OK, where do you think all of this waste is going to go? Space? Well for
